NPE-Standard

Our standard ultra condensing tankless technology with the industry's top rated unit for energy efficiency

HotButton™

Optional on-demand recirculation accessory

At the push of a button, the Navien HotButton activates the internal recirculation pump and gas fired burner to heat up the water in the supply lines. This gives your customers hot water when they need it, saving water and money. This add-on accessory is available on all NPE-A series tankless water heater models, and is California Title 24 compliant.

CASCADE UP TO 16 UNITS

ComfortFlow[®]

Exclusive built-in recirculation system included on all NPE-A models

Navien ComfortFlow[®] is the first and only system that incorporates a built-in insulated buffer tank and recirculation pump. The buffer tank eliminates the "cold water sandwich" effect and issues of minimum flow rates commonly found in other tankless water heaters. The recirculation pump saves on water bills by reducing the time to get hot water. When activated, the optional ComfortFlow mode results in additional energy usage.
